MATERIALS AROUND MY ROOM

Product observations

1. Hard-shell suitcase
Material / technical name: ABS
Common name: Hard plastic
Interesting property / use: ABS (acrylonitrile butadiene styrene) is known for toughness and impact resistance.

2. Brown shopping bag
Material / technical name: Paper (cellulose-based)
Common name: Paper / kraft paper
Interesting property / use: Paper is a lightweight sheet material made mainly from cellulose fibres.

3. Orange shoe / storage box
Material / technical name: Paperboard
Common name: Cardboard
Interesting property / use: Paperboard is lightweight and can be folded into a box.

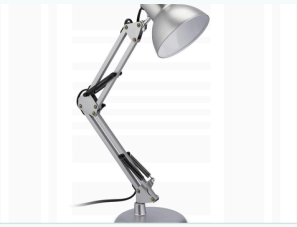

4. Desk top
Material / technical name: MDF or blockboard with laminate (possible)
Common name: Engineered wood board with laminate
Interesting property / use: MDF as medium-density fibreboard and blockboard as an engineered wood board. A decorative laminate such as Formica is a surface layer.

5. Wall pinboard
Material / technical name: Cork
Common name: Corkboard
Interesting property / use: Cork is lightweight and compressible, making it useful for pinboards.

6. Desk legs / frame
Material / technical name: Mild steel
Common name: Low-carbon steel
Interesting property / use: Mild steel is tough and easy to weld and used in furniture,

7. Desk lamp
Material / technical name: Aluminium
Common name: Metal lamp
Interesting property / use: Aluminium is lightweight and recyclable.

8. Reusable metal bottle
Material / technical name: Stainless steel
Common name: Steel bottle
Interesting property / use: SS 304 is a widely used stainless steel for utensils and kitchen products, and SS 316L as more corrosion-resistant due to molybdenum.

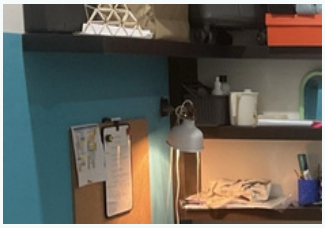

9. Plastic storage containers

Material / technical name: PP or PE
Common name: Plastic containers
Interesting property / use: Polyethylene (PE) is common in bottles and containers, and polypropylene (PP) in reusable household products. You need to check the recycling mark to identify the exact plastic.

10. Small plastic basket / organiser

Material / technical name: PPor HDPE (possible)
Common name: Plastic organiser
Interesting property / use: HDPE means high-density polyethylene and is used in packaging and consumer products. PP is also common in household organisers. The resin code is needed to confirm the material.

11. Wardrobe / shelf panels

Material / technical name: Plywood
Common name: Engineered wood
Interesting property / use: Plywood is made by bonding thin layers of wood veneers together, with the grain of adjacent layers usually placed at right angles. This cross-layer construction improves strength and dimensional stability and helps reduce splitting and warping compared with a single solid-wood board.

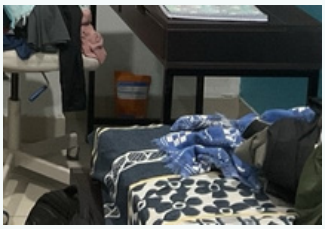

12. Plastic clothes hangers

Material / technical name: PP

- **Common name: Plastic**
- **Interesting property: It is lightweight, inexpensive, and resistant to moisture. It can be moulded into different shapes, making it suitable for everyday household items.**

13. Clothes on the chair / in wardrobe
Material / technical name: Nylon
Common name: Synthetic textile
Interesting property / use: Nylon is used in clothes, ropes, and toothbrush bristles.

14. Bedsheet
Material / technical name: Textile fibre
Common name: Bed linen
Interesting property / use: Bed linen made from cotton is soft, breathable, and absorbent. It allows air to circulate and helps absorb sweat, keeping the bed comfortable during sleep.

15. Towel
Material / technical name: Cotton
Common name: Bath towel
Interesting property / use: Cotton bath towels are highly absorbent because their fibres soak up water easily. Their looped texture increases the surface area, helping them absorb moisture from the skin efficiently

16. Electrical cable on desk
Material / technical name: PVC insulation
Common name: Plastic-coated wire
Interesting property / use: PVC (polyvinyl chloride) is a common polymer used in insulation and pipes.

17. Notebook / paper sheets
Material / technical name: Paper
Common name: Writing paper
Interesting property / use: Paper is made mainly from cellulose fibres and is easy to write on, print, cut, and fold. It is recyclable when kept clean and dry.

18. Floor tile
Material / technical name: Ceramic
Common name: Floor tile
Interesting property / use: Ceramics are hard and wear-resistant but can crack under sharp impact. They are a material family.

19. Clear food / storage tub
Material / technical name: PET, PP, or PP
Common name: Plastic container
Interesting property / use: PET (polyethylene terephthalate), PE, and PP are common plastics in packaging and containers.

20. Mirror
Material / technical name: Glass with reflective backing
Common name: Mirror glass
Interesting property / use: Glass is an inorganic non-metallic material. A mirror generally uses a glass sheet with a reflective backing.
